METAL PRINTS
Sublimation onto metal is a cutting edge and modern way to reproduce an image. This display creates the illusion of floating from the wall with a minimalist, contemporary look. The aluminum substrate is strong and durable, ensuring years of enjoyment in your home; plus, they are an ideal display for any public or high traffic areas.

The image is first printed onto a transfer paper and adhered to a pretreated aluminum substrate. The aluminum and transfer paper are placed into a custom heat press, which is heated to temperatures exceeding 380 degrees Fahrenheit. While being subjected to extreme heat and pressure, the dyes from the transfer paper turn into a gas, are pressed into the surface of the metal, and then solidify into the treated aluminum. As the dyes cool, they are permanently infused beneath the surface of the metal substrate. This process makes it more durable than traditional imaging because it is scratch resistant and cannot be peeled off the surface.

The metal print comes ready to hang on a floating wall mount and hanging cleat system.

Every metal print is meticulously inspected to meet Mangelsen’s exacting standards, with a lifetime workmanship guarantee.
